ABSTRACT

PROCESS AND FORMAT FOR RELIABLE STORAGE OF DATA

5   A process (500) for storing video and text data samples, is disclosed. The process

(500) may be implemented within a video surveillance system (100). The system (100)

comprises video cameras (110, 111, 112 and 113) connected to a communications

network (2220), such as the Internet or an Intranet. Each of the cameras (110, 111, 112

and 113) is independently responsible for the capture of video data. The system (100)

10   also comprises a viewer (2200) for processing and displaying captured video data.
